

Piotrack

THE GROWTH OPERATING SYSTEM FOR MSPs

User Guide

A to Z, in plain English, with worked examples.

Get more clients for your managed-IT business - marketing, sales, SEO, ads and AI in one place.

Welcome to Piotrack

Piotrack is one place to grow your managed-IT (MSP) business. Instead of juggling a website tool, an email tool, a spreadsheet of leads, an SEO tracker and an ad dashboard, you run all of it here - and Piotrack connects every activity back to the revenue it produced.

This guide walks through the whole app from A to Z in plain language. Each section tells you what a feature is for, how to use it step by step, and shows a worked example using a sample MSP called **Northwind IT Services** in Philadelphia.

What is inside

1. What you need to get started
2. Signing in and finding your way around
3. The Dashboard - your growth at a glance
4. CRM - contacts, companies, leads and deals
5. Marketing - forms, pages, email and automation
6. SEO - get found on Google and in AI answers
7. Advertising - paid campaigns and ROAS
8. Content, Social and Reputation
9. Sales - scoring, intent, alerts and booking
10. Analytics and Attribution - what actually made money
11. AI assistant - draft, qualify and research
12. Delivery and the Client Portal
13. Full example - one lead from click to cash
14. Handy tips and FAQ

SECTION 01

What you need to get started

To use Piotrack day to day you only need three things:

- A modern web browser (Chrome, Edge, Firefox or Safari).
- The web address of your Piotrack app and a user account (your administrator invites you by email).
- Nothing to install - Piotrack runs entirely in the browser.

Some features talk to outside services. They work in a safe **demo mode** out of the box so you can explore, and switch to live once your administrator connects an account:

- **Email campaigns** - connect an email sending provider to send for real.
- **Advertising** - connect your Google / Microsoft Ads accounts to pull in spend and results.
- **SEO and AI visibility** - connect a data provider for live rankings.
- **AI assistant** - connect an AI provider; until then it returns clearly-labelled sample text.
- **Billing** - connect a payment provider to charge customers.

Good to know: Anywhere you see a red 'demo / fixture' banner, the numbers are sample data, not live. It is safe to click around - nothing is sent to a real customer.

SECTION 02

Signing in and finding your way around

Signing in

- 1 Open your Piotrack web address. You land on the welcome page.
- 2 Click **Log in**, enter your email and password, and you arrive at the Dashboard.

The layout

- **Left sidebar** - every area of the app, grouped: Dashboard, CRM, Marketing, SEO, Advertising, Content, Website, Sales, Analytics, AI, Delivery and the Client Portal. Click a group to expand it.
- **Top bar** - the collapse button, a **Search** box (press Ctrl+K / Cmd+K to jump anywhere), and notifications.
- **Organization switcher** (top-left) - if you manage more than one company in Piotrack, switch between them here. Everything you see is scoped to the selected organization.
- **Your account** (bottom-left) - profile, settings and the light / dark theme toggle.

EXAMPLE • JUMPING TO A PAGE FAST

Press **Ctrl+K**, type `deals`, and press Enter to open your pipeline without hunting through the menu.

SECTION 03

The Dashboard - your growth at a glance

The Dashboard is your command centre. The cards across the top are your key numbers (KPIs):

- **New Leads** - people who showed interest.
- **SQLs** - sales-qualified leads worth a real conversation.
- **Meetings** - booked calls / assessments.
- **Open Opportunities** - live deals in your pipeline.
- **Qualified Pipeline** - total value of those open deals.
- **Customers Won** - deals closed successfully.
- **New MRR / ARR** - monthly and yearly recurring revenue you have won.

Below the cards, **Lead Sources** shows where your leads come from (Google, referral, ads, and so on) as ranked bars, so you can see at a glance which channels are pulling their weight.

Good to know: The Dashboard opens with the sidebar collapsed so your numbers get the full width. Click the collapse button (top-left) any time to bring the menu back.

SECTION 04

CRM - contacts, companies, leads and deals

The CRM is your customer database and sales pipeline. It has four lists, all reachable under **CRM** in the sidebar.

Contacts and Companies

Contacts are people; **Companies** are the organisations they work for. Link a contact to a company to keep everything tidy.

- 1 Go to **CRM -> Contacts** and click **New contact**.
- 2 Fill in first name, last name, email, title and phone, then click **Create**.
- 3 Click a contact's name to open their profile - details on the left, full activity history on the right.
- 4 Use the **Search** box to find anyone; use **Export CSV** to download the list.

EXAMPLE • ADDING A PROSPECT

New contact: **Michael Reed**, IT Director, michael@precisionmfg.test, linked to the company **Precision Manufacturing**. His profile now tracks every email, call and deal tied to him.

Leads and lead scoring

Leads are new, unqualified prospects (for example, a form submission). Piotrack scores each lead automatically using your rules, so hot leads rise to the top.

- 1 Open **CRM -> Leads**. Each row shows the lead, their company, source and status.
- 2 Filter by status (new, qualified, converted) using the dropdown.
- 3 When a lead is ready, click **Convert** - Piotrack creates a Contact (and Company) and can open a Deal in one step.

EXAMPLE • CONVERTING A HOT LEAD

Michael submits your 'Free IT Assessment' form and arrives as a **Lead**. Scoring rules add points: 'Decision-maker title' (+25) and 'Reached MQL' (+20). At a score of 65 he is clearly hot.

You click **Convert**, tick **Open a deal**, enter a value of **\$4,500**, and Piotrack turns him into a Contact plus a live Deal.

Deals - your pipeline

Deals are opportunities to win. They live on a drag-friendly **kanban board**, one column per stage.

- 1 Open **CRM -> Deals**. Each column is a stage; the header shows how many deals and their total value.
- 2 To move a deal forward, use the stage dropdown on its card (a coloured dot marks won / lost / active).
- 3 Click a deal to see its value, MRR, ARR, contact, company, source and expected close date.
- 4 Mark a deal **Won** when it closes - that is what feeds your revenue numbers.

SECTION 05

Marketing - forms, pages, email and automation

The Marketing area turns visitors into leads and nurtures them until they are ready to buy. Under **Marketing** you will find:

- **Forms** - build a form (name, email, message) to capture leads on your site.
- **Landing Pages** - simple campaign pages that host a form.
- **Lists** - groups of contacts you can email.
- **Campaigns** - one-off emails to a list.
- **Automation** - multi-step 'nurture' sequences that send automatically based on behaviour.
- **Funnels** - see how many people move from visit to lead to customer.

- 1 Create a **Form** called 'Free IT Assessment'.
- 2 Create a **Landing Page** and place the form on it.
- 3 Share the page's link (in an ad, email or your website). Every submission becomes a **Lead** automatically, tagged with where it came from.

- 4 Build an **Automation** so new leads get a friendly intro email a day later, then a case study three days after that.

Good to know: Every email respects unsubscribes and suppression automatically, so you stay compliant. In demo mode, sends are simulated - connect an email provider to send for real.

SECTION 06

SEO - get found on Google and in AI answers

SEO helps the right people find you when they search. Under **SEO**:

- **Keywords** - track the search terms you want to rank for and watch your position over time.
- **Audit** - a health check of your website with fixes to make.
- **Local** - your visibility in each city / branch you serve.
- **AI Visibility** - whether ChatGPT, Gemini and Perplexity mention you when someone asks for the best MSP in your area.
- **Schema** - structured data that helps search engines understand your pages.

EXAMPLE • TRACKING A KEYWORD

Northwind tracks managed IT services Philadelphia. The Keywords page shows its current position and trend, so they can see their SEO work paying off week by week.

SECTION 07

Advertising - paid campaigns and ROAS

The Advertising area brings your paid campaigns into Piotrack so you can see what you spend and what you get back.

- **Campaigns** - impressions, clicks, spend, conversions and revenue per campaign.
- **Retargeting** - re-reach people who visited but did not convert.
- **ROAS** (return on ad spend) - revenue divided by spend. A ROAS of 4.57x means every \$1 spent returned \$4.57.

Good to know: Connect your Google / Microsoft Ads account to pull real numbers; until then you will see clearly-labelled sample data.

SECTION 08

Content, Social and Reputation

Publish helpful content, keep social active, and stay on top of reviews - all under **Content**.

- **Content** - plan and draft blog posts and guides.
- **Social** - schedule and track social posts.
- **Reputation** - collect and respond to customer reviews in one place.
- **Outreach** - coordinate link-building and partner outreach.

SECTION 09

Sales - scoring, intent, alerts and booking

The Sales area helps your reps focus on the right prospects at the right moment.

- **Scoring** - the rules that grade every lead (edit these to match your ideal customer).
- **Intent** - signals that a prospect is actively looking to buy.
- **Alerts** - a notification the instant a lead turns hot, so a rep can reach out while they are warm.
- **Booking** - a meeting scheduler prospects use to book a call with you.
- **Enablement** - your sales playbooks and materials.
- **Accounts** - your key target accounts.

EXAMPLE • A SCORING RULE

Rule: if a contact's title **contains 'director'**, add **25 points**. Decision-makers now float to the top of your reps' lists automatically.

SECTION 10

Analytics and Attribution - what actually made money

This is where Piotrack earns its keep. It answers the question every MSP owner asks: **which activities actually bring in paying customers?**

- **Attribution** - traces a won deal back through the meeting, the lead, the campaign and even the keyword that started it.
- **Growth Score** - one 0-100 number grading your whole growth engine, with the weakest area to fix next.
- **Benchmarks** - how you compare to typical MSPs.
- **Omnichannel** - all your channels side by side.
- **Calls** - call tracking and outcomes.
- **Experiments** - A/B tests to see what works better.
- **Competitors** - keep an eye on rivals.

EXAMPLE • ATTRIBUTION IN ACTION

The \$4,500/mo deal with Precision Manufacturing is marked **Won**. Attribution shows the whole path: Google search -> Free IT Assessment form -> Lead -> meeting -> Deal -> Won. Now you know that one Google keyword produced real recurring revenue - so you invest more there.

SECTION 11

AI assistant - draft, qualify and research

The AI area is a sales assistant. Under **AI**:

- **Agent** - pick a contact and a task (qualify, research, draft an email) and get a suggestion; or paste a prospect's objection and get a suggested response.
 - **Approvals** - the AI never changes your data silently. Proposed CRM updates wait here for you to approve first.
 - **Conversations / Prompts / Visibility** - history, reusable prompts, and how AI engines see your brand.
- 1 Open **AI** -> **Agent**.
 - 2 Under 'Run a task on a contact', pick a contact, choose **Qualify**, and click **Run task**.
 - 3 To handle a pushback, type it under 'Handle an objection' and click **Suggest a response**.
 - 4 Any change the AI proposes appears under **Approvals** - review, then approve or reject.

Good to know: By default the AI runs in fixture mode and returns clearly-labelled sample text - do not send it to a customer. Ask your administrator to connect a live AI provider for real output.

SECTION 12

Delivery and the Client Portal

Once you win a customer, the Delivery area and Client Portal keep them happy.

- **Projects** - track onboarding and delivery work.
- **Support** - handle customer tickets.
- **Strategy / Brand / Performance** - your plan, brand assets and how you are tracking against goals.
- **Client Portal** - a clean, shareable space where your customers can see their own progress.

SECTION 13

Full example - one lead from click to cash

Here is how the whole app works together, following one real journey end to end at Northwind IT Services:

- 1 **Get found.** Michael searches Google for 'managed IT services Philadelphia' and finds Northwind (SEO).
- 2 **Capture.** He clicks a landing page and submits the 'Free IT Assessment' form (Marketing). He arrives in Piotrack as a **Lead**, tagged source = Google.
- 3 **Qualify.** Scoring rules push him to 65 - hot. An **Alert** fires to a sales rep (Sales).
- 4 **Meet.** The rep uses **AI -> Agent** to draft a tailored intro email, and Michael books a call via the Booking page.
- 5 **Open a deal.** The rep **Converts** the lead into a Contact plus a **\$4,500/mo Deal** (CRM).
- 6 **Progress and win.** The deal moves across the pipeline and is marked **Won** (CRM).
- 7 **Prove it.** The Dashboard MRR/ARR go up, and **Attribution** credits the win to that Google keyword (Analytics) - so Northwind confidently invests more in what works.

EXAMPLE • THE PAYOFF

One number ties it together: that journey turned a single search into **\$54,000 of tracked ARR**, and Piotrack shows exactly which activity earned it.

SECTION 14

Handy tips and FAQ

- **Search anything** - press Ctrl+K (Cmd+K on Mac).
- **Dark mode** - use the sun / moon toggle by your name (bottom-left).
- **Multiple companies** - switch with the organisation picker (top-left); data never mixes between them.
- **Export** - most lists have an **Export CSV** button.
- **Permissions** - if you cannot see a menu, your role does not include it - ask your administrator.
- **'Session expired'** - if you have been idle a long time, just sign in again; your work is saved.
- **Demo banners** - red 'fixture' banners mean sample data; connect the matching provider to go live.

That is Piotrack, A to Z. Start on the Dashboard, add a few contacts, capture a lead with a form, and watch the pipeline and attribution light up. Welcome aboard.
